Microsoft Office 2013 English (x86 x64) 32 Bit / 64 Bit Version Free Download.Q: When is $\|I^N - A^N\| \approx 0$? Let $A \in M_n(\mathbb{R})$ be a symmetric matrix. What is the largest integer N such that $\|I^N - A^N\| \approx 0$? In this question, I would like to know whether or not it is true that there exists some N_0 such that $\|I^N - A^N\| \approx 0$ for $N \geq N_0$ if $\lambda_1 > \lambda_2 \geq \dots \geq \lambda_n$ are the eigenvalues of A . Thank you. A: You could use a spectral decomposition of A $A = \sum_{i=1}^n \lambda_i P_i$ where P_i is the projection on the eigenspace of λ_i , to obtain $(I - A)^N = \sum_{i=1}^n (I - \lambda_i P_i)^N$. If you assume that the eigenvalues are pairwise different, the previous identity implies $\|(I - A)^N\| \leq \sum_{i=1}^n \|(I - \lambda_i P_i)^N\|$. Since $\lambda_i > 0$ for all i , it is clear that $\|(I - \lambda_i P_i)^N\| \leq \lambda_i^N N!$ and so $\|(I - A)^N\| \leq \sum_{i=1}^n \lambda_i^N N!$ It should be clear that, for some N , the terms $\|(I - \lambda_i P_i)^N\|$ are of the order $1/\lambda_i^N$ or smaller. Therefore, it should be possible to conclude that the series are in fact equal. The full cast of #Avengers: Endgame was unveiled during 2d92ce491b
