The Effect of Urbanization on Carbon Uptake and Storage by Urban Green Areas in Taipei City, Taiwan. It is increasingly recognized that landscape urbanization changes land cover, surface temperature, and evapotranspiration of urban green areas, which could affect the uptake and storage of atmospheric carbon (C). A land use and cover change (LUCC) model was used to evaluate the impact of urbanization on C balance in three representative urban green areas (UGAs) of Taipei, Taiwan, and the results were compared with that of a rural area (RUA).

The results show that during 2001-2010, the area of UGA was 14.32 km² in the urban core area, while that of RUA was 3.14 km² in the rural suburb area. The average annual C uptake of UGA was 795 tC ha⁻¹ yr⁻¹, which was significantly higher than the C uptake of RUA (558 tC ha⁻¹ yr⁻¹). The monthly C uptake of UGA in the dry season is higher than that of RUA, but no significant difference in wet season was found between the two areas. The total C uptake of UGA during 2001-2010 was estimated at 7,840 tC. Based on this value and the average area of UGA, the annual C storage in UGA was estimated at about 4.1 tC ha⁻¹ yr⁻¹. These results suggest that urban green areas can play a role in C sequestration in urban areas, which could offset a part of the anthropogenic C

emission. Therefore, the improvement of urban green areas is a crucial component of urban sustainable development. Q: Is it right to answer with a link to a book when you do not have the book? I am not sure if it is OK to answer a question with a link to a book, if I do not own the book. I want to link to a book in which there is a post of a solution to the question, but I do not own that book. I want to know if that is right to answer a question with a link to a book, because some of them may not know how to
