What's New In?

One of the main features of Top Secret is the encryption method it implements, which is called "Time Doubling." Other than being the safest method, it also happens to be the most time-consuming, which is why you should select this mode with the utmost care. During the procedure, any information you enter is doubled every five seconds, so to say, until the end of the operation. When it comes to files, the program uses AES 256 encryption, while the text that you enter is ciphered using a 7-digit number. You can safely rely on the security of the apps' results, which are invisible in any way. Besides, the program also offers an advanced option to revert back to previous values, which lets you return your text or files to their previous condition in just a few clicks. Make your text and files unreachable to intruders

Another aspect of the program's dedication is its password protection feature, which lets you add as many passwords as you need to guarantee that your sensitive data remain safe. The password system of this app can be accessed by holding down the shift key on your keyboard and entering the password. It also lets you configure the duration of a single password. From the security point of view, Top Secret is an efficient program that is resistant to prying eyes. On the downside, though, it makes you work and a minor issue keeps it from ranking higher than four stars.

You may also use Remote Desktop Services to access a desktop remotely over the Internet. Many businesses connect Windows PCs to a corporate network, which provides a firewall. Through the firewall, only approved applications are permitted to access the network. The host computer or an authorized application running on the host computer forwards the connections to the network.
